EDUCATION

Georgia Institute of Technology **Atlanta, GA**

- **Ph.D. in** Computer Science, **advised by** **Wenke Lee** Aug. 2025 – Present

Wuhan University **Wuhan**

- **B.Eng. in** Communications Engineering (Artificial Intelligence Track) Sept. 2021 – Jun. 2025
- **GPA:** 3.90/4.00 | **Rank:** Top 5% | **1st class Academic Scholarship** & **Merit Students Award**

PROFESSIONAL EXPERIENCE

Zoom Communications, Inc., AI Incubation | Research Intern May. 2026 – Aug. 2026

Native Action Merging for Efficient Computer-Use Agents

- Proposed an execution-batching framework that merges consecutive GUI actions when intermediate observations are unnecessary, reducing redundant visual processing and model deliberation.

Bosch Research & Innovation Software Development | Lead Research Intern Jul. 2024 – May. 2025

D²GS: Dense Depth Regularization for LiDAR-free Urban Scene Reconstruction

- Co-optimized **diffusion-based depth generation** and **3D Gaussian Splatting** via an **iterative enhancement training** pipeline for LiDAR-free **urban reconstruction**; Added a **Gaussian Scene Graph** with a Road Node and road-specific losses; conducted rigorous benchmarking on **Waymo NOTR Dynamic32**.

RESEARCH EXPERIENCE (Project leader & Core member)

Georgia Institute of Technology, GTISC Lab. | Ph.D. Student Jan. 2026 – Present

Rhythm of Thought: Progress-Aware Latent Reasoning via Reinforcement Learning

- RoT is a progress-aware latent reasoning framework. At each decoding step, RoT predicts a Gaussian distribution over reasoning progress from hidden summaries at the previous step, and then converts the predicted mean and variance into an uncertainty-calibrated phase representation that modulates decoder layers within the thinking span.

MetaState: Persistent Working Memory Enhances Reasoning in Discrete Diffusion Language Models

- Developed MetaState, a lightweight recurrent **working-memory augmentation** for **dLLMs** that mitigates the **Information Island bottleneck** by persisting **cross-step continuous information**. Yielding consistent gains on reasoning/coding benchmarks with **negligible added parameters**.

EDITOR: Effective and Interpretable Prompt Inversion for Text-to-Image Diffusion Models

- Developed EDITOR, an interpretable **prompt inversion** framework for text-to-image diffusion models that introduces **continuous contextual-latent optimization** via caption initialization, **latent space reverse-engineering**, and embedding-to-text converting.

Georgia Institute of Technology, EIC Lab. | Undergrad to Ph.D. Student May. 2024 – Feb. 2026

R²-dLLM: Accelerating Diffusion Large Language Models via Spatio-Temporal Redundancy Reduction

- Developed R²-dLLM, a unified **redundancy reduction** framework to accelerate **dLLM** decoding. Identified **spatial redundancy** (confidence clusters, positional uncertainty) and **temporal redundancy** (early-converged tokens). Proposed 1) training-free decoding mechanism, and 2) redundancy-aware **SFT** to align efficient trajectories.

Soft Token Interpolation for Masked Diffusion LLM: Training-Free Step-to-Step State for dLLM Decoding

- Proposed a training-free **interpolation** for **dLLMs**: cache per-token top-k candidate probabilities and reinject them as **probability-weighted embeddings mixtures** to introduce **a continuous intermediate state** between mask and decoded tokens, mitigating **hard-mask information loss** and enabling **step-to-step semantic carryover**.

LongMamba: Enhancing Mamba's Long-Context Capabilities via Training-Free Receptive Field Enlargement

- Discovered **local vs. global channels** in **Mamba LLMs** via per-channel receptive-field analysis; identified **exponential hidden-state decay** in **global channels** as the key bottleneck for **long-context extrapolation**.
- Proposed a training-free receptive-field enlargement pipeline: **classify channels** by cumulative decay and apply **token filtering in global channels** to prevent unimportant-token accumulation and **maintain long-range memory**.

LAMB: A Training-Free Method to Enhance the Long-Context Understanding of SSMs via Attention-Guided Token Filtering

- **Analyzed "attention" patterns** of SSMs and proposed a **pseudo-attention importance metric** to preserve critical tokens during inference, enabling **training-free long-context extension** for **Mamba & hybrid LLM** models.

Wuhan University, Signal Processing Lab. | Undergrad Student Oct. 2023 – Apr. 2024

BRS-E^{2}NeRF: Event-Enhanced Neural Radiation Fields from Blurry Rolling Shutter Images

- Developed a **unified event+RGB pipeline** for **NeRF under fast motion** that **jointly corrects rolling-shutter distortion and motion blur** from blurry RS images for sharp **3D reconstruction** and **novel-view synthesis**.

RESEARCH INTERESTS

- **LLM Reasoning and Agents**: Latent and Explicit reasoning, Computer use agent, Alignment.
- **Diffusion LLMs**: Decoding Acceleration, Hybrid-continuous dLLM.
- **Efficient LLMs**: Long-context modeling, Training-free optimization.
- **3D Vision**: 3D Gaussian Splatting, Event-based vision, Neural Radiance Fields.
