Education

Georgia Institute of Technology *Aug. 2025 – Present*
Ph.D. Student in Computer Science
- Advisor: Prof. Wenke Lee

Wuhan University *Sep. 2021 – June 2025*
B.Eng. in Communication Engineering (Artificial Intelligence Track)
- GPA: 3.90/4.00, Ranked in the Top 5% of the program.

Research Interests

My research focuses on **understanding and improving reasoning in language models**. I study useful structure in model computation, reasoning trajectories, and interaction data, and use these insights to guide model design, post-training, and inference algorithms.

- **Reasoning and Inference Mechanisms**: MetaState and RoT study how information flow and process signals can guide reasoning. LongMamba and R²-dLLM use model dynamics to improve long-context inference and diffusion decoding.
- **Learning from Interaction and Task Structure**: LookAgain-CUA learns when agents need new observations, while SourceLearn uses task feedback to refine reusable source understanding. GEvol uses task dependencies to evolve executable benchmark tasks.

Experience

Georgia Institute of Technology, GTISC Lab | Ph.D. Student *Jan. 2026 – Present*
Advisor: Prof. Wenke Lee
Research Focus: *Reasoning, Agents, and LLM Post-Training*
- **MetaState** [**COLM'26**] equips a frozen dLLM with lightweight recurrent working memory, carrying continuous information across denoising steps with approximately 0.6% trainable parameters.
- **Rhythm of Thought** [**Preprint**] estimates trace-relative progress from hidden states and uses an uncertainty-aware representation to condition decoder computation, combining RL with progress supervision.
- **SourceLearn** [**Preprint**] turns repeated access to a persistent source into reusable source understanding through self-directed study and task-guided refinement of an external source model.

Zoom Communications, Inc., AI Incubation | Research Intern *May 2026 – Aug. 2026*
Mentor: Dr. Renqian Luo
Research Focus: *Efficient Computer-Use Agents*
- **LookAgain-CUA** [**Preprint**] learns when multiple GUI actions can be decided from available evidence. BoundaryTrace provides multi-action supervision for self-refined SFT, and cost-aware RL refines the policy.

Georgia Institute of Technology, EIC Lab | Undergraduate to Ph.D. Student *May 2024 – Dec. 2025*
Advisor & Mentors: Prof. Yingyan (Celine) Lin , Yonggan Fu , Zhifan Ye
Research Focus: *Efficient Diffusion Decoding and Long-Context Modeling*
- **LongMamba** [**ICLR'25**] identifies local and global channels in Mamba, traces a bottleneck in long-context extrapolation to state decay in global channels, and enlarges their receptive fields through selective state updates without retraining.
- Related work includes R²-dLLM [**Preprint**] for redundancy-aware diffusion decoding, training-free soft token interpolation for masked dLLMs, and LAMB [**ACL'25**] for attention-guided token filtering in SSMs.

Bosch Research & Innovation Software Development | Research Intern *July 2024 – May 2025*
Mentor: Dr. Youjian Zhang
Research Focus: *Geometric Priors for Urban Scene Reconstruction*
- **D²GS** [**NeurIPS'25**] reconstructs urban scenes without LiDAR by iteratively co-optimizing diffusion-refined depth estimates and 3D Gaussian Splatting, with progressive pruning and road-specific geometric constraints.

Wuhan University, Signal Processing Lab | Undergraduate Researcher *Oct. 2023 – Apr. 2024*
Advisor: Prof. Lei Yu
Research Focus: *3D Vision and Event-based Vision*
- **BRS-E²NeRF** [**PR'26**] combines events and RGB images through event-enhanced re-blurring and double-cycle optimization to jointly correct motion blur and rolling-shutter distortion for 3D reconstruction.

Honors and Awards

- **Top Reviewer**, NeurIPS 2026 Main Conference *2026*
- **National Second Prize (5th Place)**, RoboCup China Open, Team Captain *2024*
- **First-Class Academic Scholarship**, Wuhan University *2023 – 2024*
- **"Luojia" Distinguished Exchange Student Scholarship**, Wuhan University *2023 – 2024*
- **National-Level Prize**, Student Innovation & Entrepreneurship Project *2023 – 2024*
- **National First Prize**, Huazhong Cup Mathematical Modeling Challenge *2023*
- **Hubei Province First Prize**, China Undergraduate Mathematical Contest in Modeling *2023*

Teaching and Service

- **Teaching Assistant**, CS 6035 Introduction to Information Security, Georgia Tech *Fall 2026*
- **Teaching Assistant**, CS 6262 Network Security, Georgia Tech *Spring 2026*
- **Teaching Assistant**, CS 4803/8803 Efficient Machine Learning, Georgia Tech *Fall 2025*
- **Conference Reviewer**, ECCV, COLM, NeurIPS, EMNLP, ICLR, NAACL *From 2026*
